

Creating a Bales IPA Chart

- a. Using the Bales IPA chart shown above in figure 1.3 as a guide, devise an IPA chart that you will use to gauge the overall attitude of the post you have selected. The chart shown above does not allow for an observer to make notations or keep a tally so transferring it to a better format is necessary.

Note: The Bales IPA chart shown above can be customized to fit a situation, however for this instance we are going to use the standard IPA method for determining polarity.

- b. Here is the chart we will use to record our findings for our sentiment analysis. As you can see it is similar to the Bales IPA chart above but has been shortened down to only four categories.

c.

Note: As previous studies have shown, the Bales IPA chart can be altered to better fit the study. (Coppola) It is highly recommended that you provide your reasons for altering format of the chart for future readers to understand the conclusions you draw from this.

Category	Count
1) Shows solidarity, raises other’s status, gives help or rewards response. Generally seems friendly.	
2) Shows tension release such as jokes, laughs, shows satisfaction, and dramatizes in a positive way.
