

Skyscanner Evaluation

Team member: Piotr Kotlinski, 鄭敬儒, 鄭欽安

A. Introduction

In this Skyscanner evaluation, our goal was to simulate the experience of working for a real company. We wanted to do it as accurately as possible, that is why we decided to do, both, heuristic evaluation and usability testing. We assumed that doing heuristic evaluation will let us not only get to know the website very well, so the tasks we will create for users will be designed better, but also will enrich our knowledge about good design and good user-centered practices.

B. Introduction Skyscanner

Skyscanner is a travel fare aggregator website (website that aggregates search results from various search engines) and travel search engine that is based in Edinburgh in Scotland. It is available in 30 languages and is being used by almost 60 millions of people per month. Its creators, Gareth Williams, Barry Smith and Bonamy Grimes were inspired by the difficulties of finding cheap flights to ski resorts.

We chose Skyscanner because it is very successful, useful, won a lot of awards and is very well received both in Europe and in Asia. While it is easy to find examples of bad design and planning, user-friendly websites aren't that common.

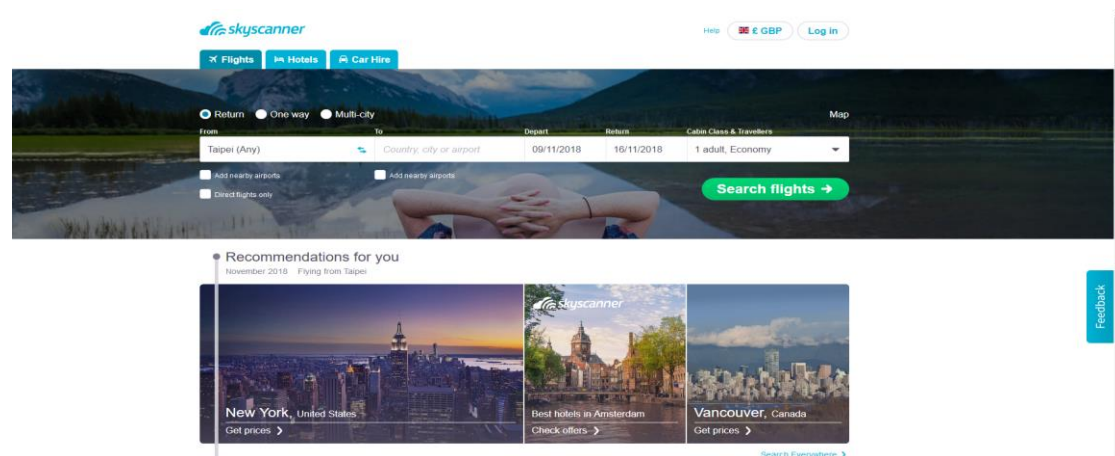

Fig1. Skyscanner website

C. Heuristic Evaluation

1. Goal and research questions

The main goal of the heuristic evaluation is to identify problems with the UI design of the Skyscanner, analyze the severity of the problems and finally create solutions based on standards, conventions and good practices.

Research questions:

- Can design of the Skyscanner be considered “good”?
- Do the website have problems with high severity?
- How can the identified problems be solved and what are the recommended action according to conventions and best practices?
- What can we learn from Skyscanner?

2. Method

We decided to use heuristic method created by usability consultants Rolf Molich and Jakob Nielsen, who developed it on the basis of several years of experience in teaching and consulting about usability engineering. Heuristic evaluation is based on the deep analysis of 249 usability problems from 11 different projects.

The main benefits of this method:

- It is cheap - doesn't require lab or special equipment or paying the test subjects
- It is very fast - comparing to traditional methods that can take weeks to complete
- It is relatively fast to learn

Another benefits of the heuristics described below is that, we can call it “distilled”, what means that they have big explanatory power, are very clear and easy to understand and categorize the problems we meet.

- ***Visibility of system status***

The system should always keep users informed through appropriate feedback within reasonable time.

- ***Match between the system and the real world***

The system should speak the users' language, with words, phrases and concepts familiar to the user, rather than system-oriented terms. Follow real-world conventions, making information appear in a natural and logical order.

- ***User control and freedom***

Users often choose system functions by mistake and will need a clearly marked "emergency exit" to leave the unwanted state without having to go through an extended dialogue. Support undo and redo.

- ***Consistency and standards***

The system should always keep users informed about what is going on, through appropriate feedback within reasonable time.

- ***Error prevention***

Careful design that helps to prevent user making mistakes

- ***Recognition rather than recall***

Minimize the user's memory load by making objects, actions, and options easily visible. The user should not be forced to remember information! Instructions how to use our system should be visible or easily retrievable whenever appropriate.

- ***Flexibility and efficiency of use***

Accelerators and shortcuts may often speed up the interaction for the expert user

- ***Aesthetics and minimalist design***

Dialogues should not contain information which are irrelevant to the users goals. Every extra unit of information in a dialogue competes with the relevant units of information and diminishes their relative visibility.

- ***Help users recognize, diagnose, and recover from errors***

Error messages should be expressed in plain language (no codes), precisely indicating the problem, and constructively suggest a solution.

- ***Help and documentation***

It is necessary to provide users with documentation, which should be easy to search, process and use.

3. Process

At the beginning all of us, individually, went through the website (**on the laptop and cellphone**) a couple of times to learn the pathways and understand the main user goals and usage. To avoid bias, we didn't read user comments about the website until the very end of evaluation part of the process.

During this activity we learned that the main goals of users are:

- Finding flights (best ratio of price/time, best price, best time)
- Finding hotels (by price, location, user ratings, stars)
- Renting Car(class, type, pick up, features, star rating etc)

This helped us to create the tasks that should cover the whole usage of the website and through which all of us will go in the search of heuristic problems. Because the tasks will be very well tested, we will use them later during the usability testing. This will help us avoid problem and look more professional in the eyes of users, because we will already know all the answers for the problems they might encounter. After individual evaluation, we will do the group evaluation, which will help us better understand the problems, counter our personal biases what will lead to better judgement.

4. Tasks

The tasks we design and go through :

- Login to the Skyscanner using provided credentials
- Your friend from Poland invited you to Warsaw. You decide to depart from Taipei at 30/11/2018 and take one way ticket. You know that he will arrive to Warsaw long before you, so you decided to take the fastest flight
- After very long year of hard work you decided to take a flight to Paris and rent a luxury hotel. You want to depart 30/11/2018 and return 09/12/2018. You want to land on Charles de Gaulle airport. You want to take the best possible flight when it comes to the price/time ratio. During this time you want to reserve the best hotel when it comes to the user ratings.

- After very long year of hard work you decided to take a flight to Paris and rent a luxury hotel. You want to depart 30/11/2018 and return 09/12/2018. You want to land on Charles de Gaulle airport. You want to take the best possible flight when it comes to the price/time ratio. During this time you want to reserve the best hotel when it comes to the user ratings.
- During winter vacation, you want to take a trip to Tokyo with your friend for five days. Because you are students, you decided to find the cheapest round-trip tickets in January.
- The typhoon is coming soon. The reporter said it will land on 2018/10/31. And now you are in Tokyo. So you need to back to Taipei before Typhoon coming. And you want to choose a cheapest ticket before 2018/10/31.

5. Individual findings and evaluation

(1) Positive finding 1

- Advantage: Clean design and clear layout
- Heuristics: Visibility of system status, aesthetics and minimalist design
- Description: The website is easily navigable, have clean layout that doesn't take the users focus from the tasks

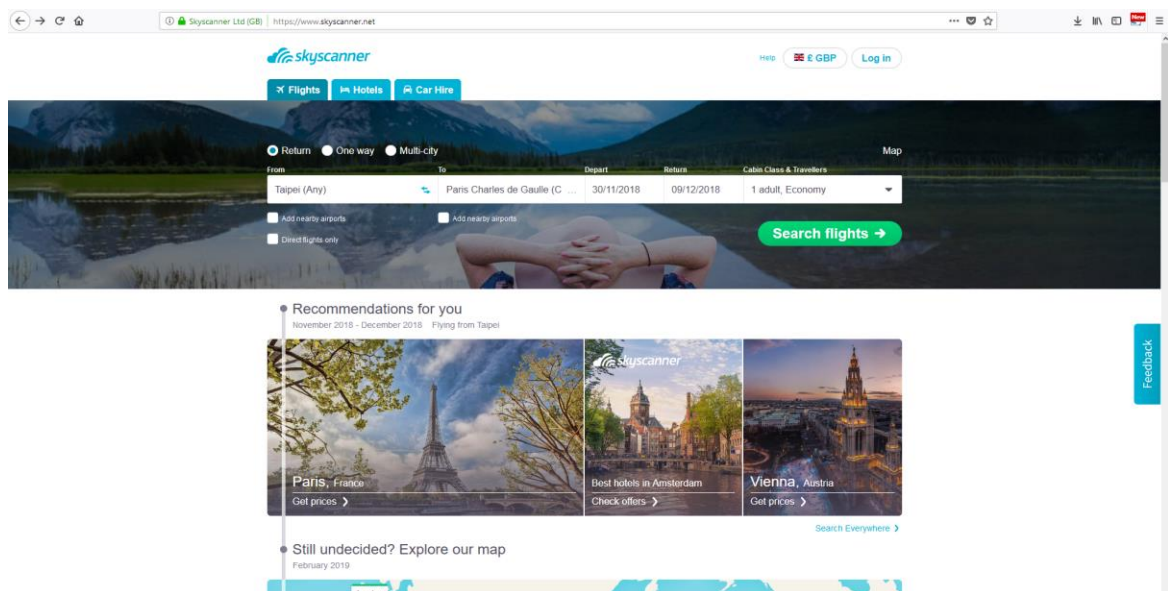

Fig2. Clean design and clear layout

(2) Positive finding 2

- Advantage: The search engine does the price/time analysis
- Heuristics: Visibility of system status, flexibility and efficiency of use
- Description: websites engine analyze the prices and time for the user, what makes the tasks easier and more efficient.

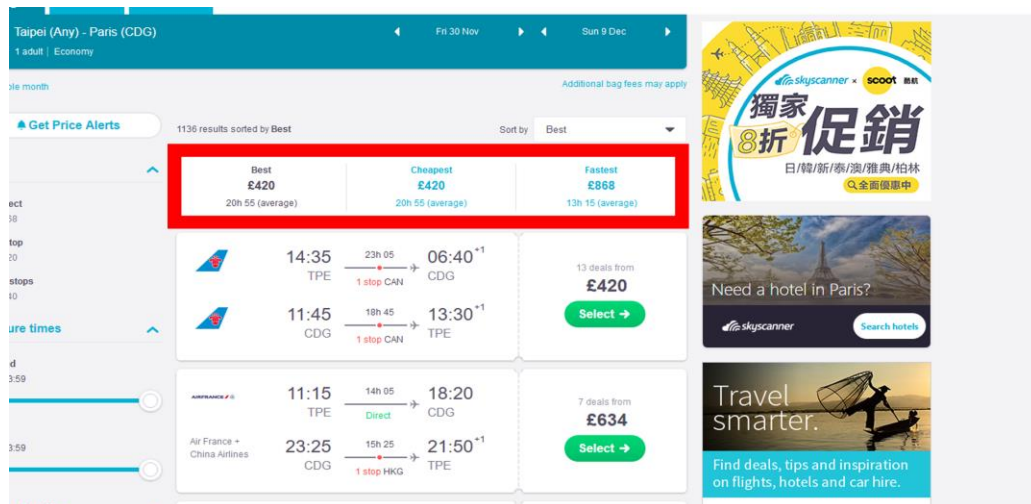

Fig3. The search engine does the price/time analysis

(3) Positive finding 3

- Advantage: Website remembers our search
- Heuristics: Flexibility and efficiency of use, error prevention
- Description: The website have very helpful feature - when we are looking for car/hotel after searching for the flight, the localization and date are already there for us. After I searched for flight from Taipei to Paris and clicked the Hotels tab, it already showed the Paris and the right dates

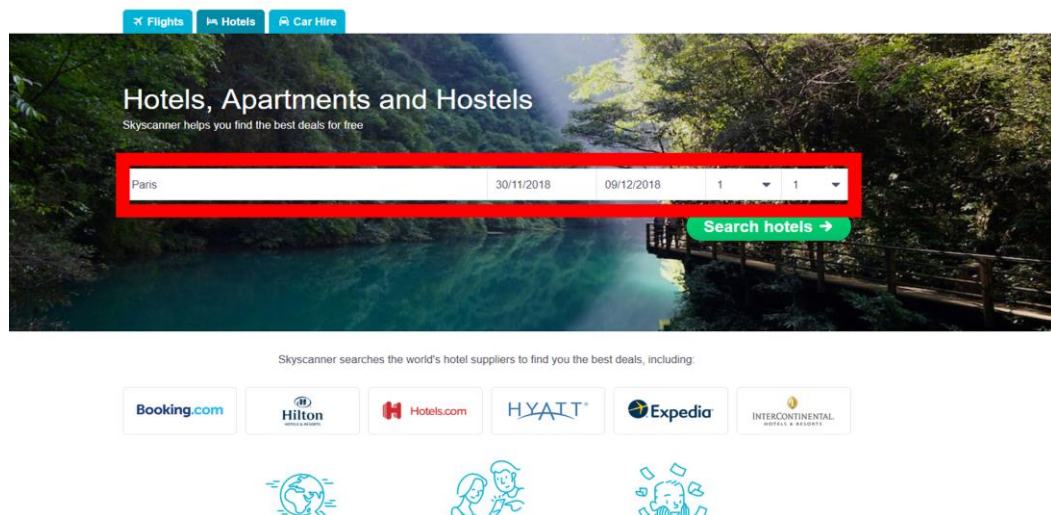

Fig4. Website remembers our search

(4) Positive finding 4

- Advantage: Tracking the price changing
- Heuristics: Flexibility and efficiency of use, error prevention
- Description: Because the price of ticket always change. When we still not sure which ticket we will buy, we can track the price by this function.

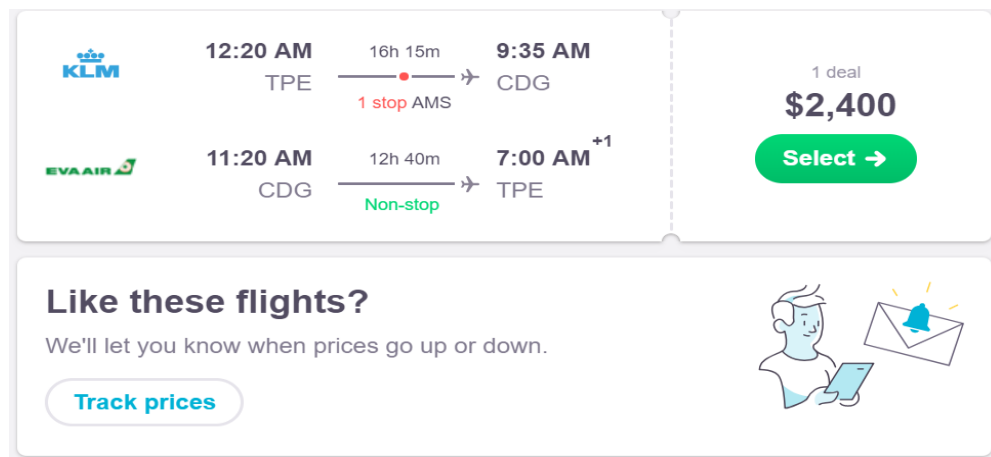

Fig5. Tracking the price changing

(5) Problem finding 1

- Problem: Main Menu is hard to access in lower resolutions
- Heuristic violations: Aesthetics and minimalist design, error prevention
- Description: While using older cell phones/lower screen resolution the menu is hard to access.
- Severity: 2

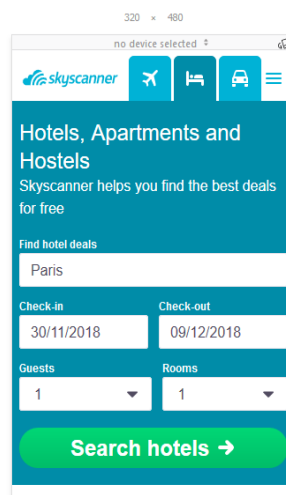

Fig6. Main Menu is hard to access in lower resolutions

- **Recommendation**
Make the logo and tabs a little bit smaller, make the hamburger menu bigger

(6) Problem finding 2

- Problem: In some parts there is a problem with responsive design
- Heuristic violations: Aesthetics and minimalist design, error prevention
- Description: While the problem is relatively small, it might destroy the general users impression.
- Severity: 2

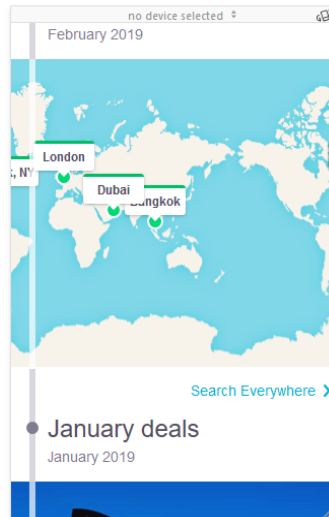

Fig7. In some parts there is a problem with responsive design

- **Recommendation**
Carefully check the css width scaling of particular elements

(7) Problem finding 3

- Problem: Links and their pictures are too small
- Heuristic violations: Error prevention, flexibility and efficiency of use
- Description: While it's great that we can access dedicated websites in our languages, the links are too small and it is very easy to click on the wrong one when we are using cellphone.
- Severity: 2

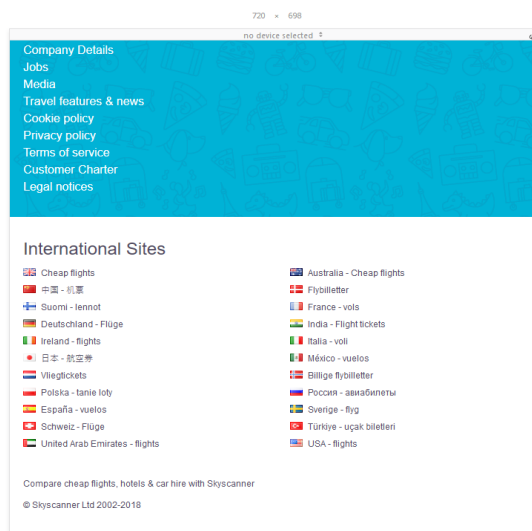

Fig8. Links and their pictures are too small

- **Recommendation**
Make the flags and links bigger

(8) Problem finding 4

- Problem: Commercials take too much space
- Heuristic violations: Error prevention, visibility of system status, aesthetics and minimalist design
- Description: Comparing to the content, commercials take too much space, especially that the main container doesn't take full width. Because of that, the fonts of the content are small and might be hard to see for an older person.
- Severity: 3

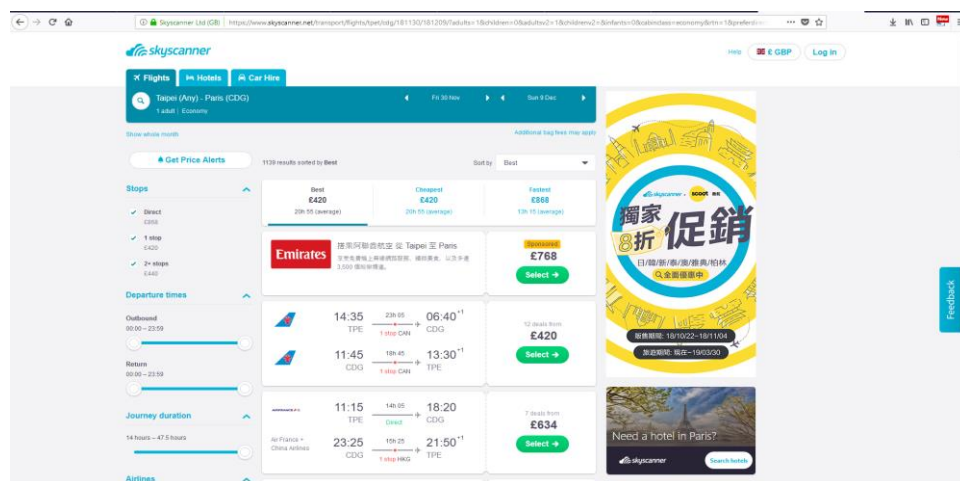

Fig9. Commercials take too much space

- **Recommendation**
Either resize the commercial banners so the main content can be made bigger or resize the whole main container.

(9) Problem finding 5

- Problem: Inconsistent pricing
- Heuristic violations: Visibility of system status, consistency and standards
- Description: While most of the time prices on the Skyscanner are accurate, it happens far too often that they change when we are directed to the website, where we can buy a ticket. It seems strange, since the user has to wait for the prices to load after choosing his directions and dates.
- Severity: 3

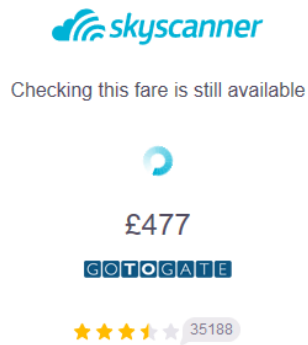

Fig10. Inconsistent pricing

- **Recommendation**
Actualize the Skyscanners database more often, so the sure doesn't have to wait two times and, in case of the different price, doesn't have to star the whole process all over again

(10) Problem finding 6

- Problem: Annoying questionnaire
- Heuristic violations: Visibility of system status, aesthetics and minimalist design
- Description: After we are redirected to the GotoGate, which opens in the new window, when we come back to the Skyscanner website, we are welcomed with the pop-up ad. After going through the comments, we found that a lot of users find it irritating.
- Severity: 1

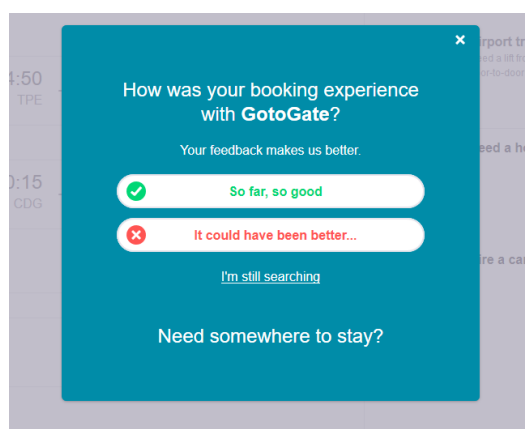

Fig11. Annoying questionnaire

- **Recommendation**
Find different moment to ask, or add this question to the feedback that shows on the right side of the main webpage.

(11) Problem finding 7

- Problem: Bag fee price is not clear
- Heuristic violations: Error prevention
- Description: It's hard for users to notice that "Additional bag fees may apply". Some of prices contain the bag fees, but some don't. This will confuse the users especially first-time users.
- Severity: 3

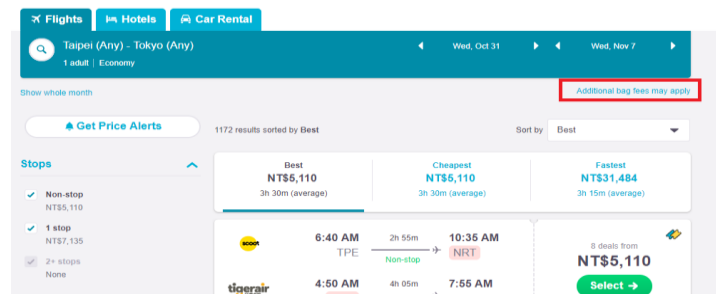

Fig12. Bag fee price is not clear

- **Recommendation**
Resize the text of "Additional bag fees may apply". If not impossible, indicate whether the prices contain bag fee or not.

(12) Problem finding 8

- Problem: The time connect in the airport
- Heuristic violations: Error prevention
- Description: For someone often going abroad remembering to care about spending time connect in airport naturally. But for someone seldom going aboard, the time connect in airport should be aware. Because it may miss the flight, if the time connect in airport is too short.
- Severity: 2

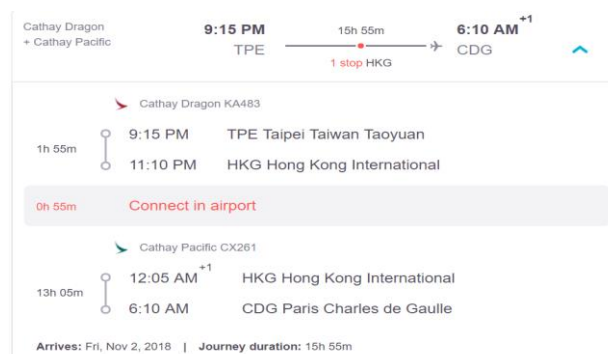

Fig13. The time connect in the airport

- **Recommendation**
The time connect in the airport can show larger or in early step during searching flight

6. Group Evaluation

Group evaluation showed us, that the website have only 3 problems with higher severity. Fortunately most of them can be easily solved by simple CSS editing. When it comes to the “Inconsistent pricing”, we strongly recommend solving it. Like we mentioned above, we also went through users’ ratings and comments after doing our own evaluation and this issue was among the most often mentioned.

Problem	Peter	Henry	Chin-An
Main Menu is hard to access in lower resolutions	2	2	2
In some parts there is a problem with responsive design	2	2	2
Links and their pictures are too small	2	2	2
Commercials take too much space	3	3	2
Inconsistent pricing	3	2	3
Annoying questionnaire	1	1	1
Bag fee price is not clear	3	2	3
The time connect in the airport	2	2	2

Table1. group evaluation

7. Conclusions

Skyskanner is not only very useful website. We also consider it very well designed. It is minimalistic and simple, but is able to still remain stilistically satisfactory. The layout is very clear. Our actions meet vell thought-through feedback, what makes it easy to navigate.The font is well readable, we only wish it was bigger.

E. Usability Testing

1. Process

Here is our process of usability test

- **Pilot Test:**

The setup and all the questions were first tested among the team. All of us, individually, went through all the tasks. We wanted to avoid system errors and

prepare ourselves to make the actual test with “real people” go fluently.

- **Find User:**
We recruited people with different backgrounds and traveling experience and try to reach different age groups.
- **Introduce:**
The user gets informed about the goal of the test, that his participation is voluntary and can be terminated at any time. We remind him/her that we are grading the system, not him/her. We also inform that everything will be recorded, so we need our consent form signed and describe the tasks. The detail of interview scripts and consent form are in 3. Experiment Detail.
- **Task:**
We focused on common tasks and multi-tasks. We start with easy warm-up tasks and steadily graduate the difficulty level.
- **Post questions:**
The post questionnaire goal is to check the experience and impressions of the user about the system.
- **Debrief:**
Debriefing includes the general talk with the user about his impressions, questioning about the mistakes he/she did (if there are any) and how could those be avoided in the future, and outro script.

2. Task

The tasks are as same as heuristic evaluation:

- Login to the Skyscanner using provided credentials
- Your friend from Poland invited you to Warsaw. You decide to depart from Taipei at 30/11/2018 and take one way ticket. You know that he will arrive to Warsaw long before you, so you decided to take the fastest flight
- After very long year of hard work you decided to take a flight to Paris and rent a luxury hotel. You want to depart 30/11/2018 and return 09/12/2018. You want to land on Charles de Gaulle airport. You want to take the best possible flight when it comes to the price/time ratio. During this time you want to reserve the best hotel when it comes to the user ratings.
- After very long year of hard work you decided to take a flight to Paris and rent a luxury hotel. You want to depart 30/11/2018 and return 09/12/2018. You want to land on Charles de Gaulle airport. You want to take the best possible flight when it comes to the price/time ratio. During this time you want to reserve the best hotel when it comes to the user ratings.
- During winter vacation, you want to take a trip to Tokyo with your friend for five days. Because you are students, you decided to find the cheapest round-trip tickets in January.

- The typhoon is coming soon. The reporter said it will land on 2018/10/31. And now you are in Tokyo. So you need to back to Taipei before Typhoon coming. And you want to choose a cheapest ticket before 2018/10/31.

3. Experiment Details

The details setting and document of usability testing:

- Test setting:
Equipment: Pen, paper, camera, laptop and smartphone.
Recording method: Video recorder and screen recorder.
- Four roles:
Moderator: Guide the test participant through the tasks. Read the scripts. Give hints.
User: Follow the instruction from the moderator. Inform about problems faced during test process.
Note taker: Notes any activity during test process. Mark the tasks checklist based on task success criteria.
Observer: Checks if moderator and note taker didn't miss anything.
- Consent Form:
Contents: Before usability testing, we need to let user know something and agree something, like recording video. The consent form is in the appendix [part 1.]
- Interview Script:
Contents: The content, agreement, remind of usability test to let participation know. And the task and table to let us record experiment problem and result. Besides, there are also some interview questions. The consent form is in the appendix [part 2.]

4. Evaluation (Quantitative results, Qualitative results, others)

(1) User Background

- **User 1:** Electrical Engineer, Male, 35 years old, Taiwanese, has experience with skyscanner.
- **User 2:** EE NTHU undergraduate student, Male, 22 years old, Taiwanese, never use skyscanner before.
- **User 3:** EECS NCTU Master student, Male, 27 years old, Indian, has little experience with skyscanner.
- **User 4:** Chemistry NCTU PhD student, Female, 32 years old, Polish, has experience with skyscanner.

(2) To evaluate the success rate we used 3-level scale:

- **Complete success** (with and without assistance)
- **Partial success** (with and without assistance)
- **Complete failure** (with and without assistance)

(3) Task 1:

- **Question:** Login to the Skyscanner using provided credentials:
email: interactiondesignnthu2018@gmail.com, password: Nthu2018
- **Purpose:** Warm up for usability testing.
- **Result:**

	User 1 Taiwanese Experienced	User 2 Taiwanese Inexperienced	User 3 Foreigner Inexperienced	User 4 Foreigner Experienced
Completed	Complete failure	Complete failure	Complete failure	Complete failure
Time	1 min 10 s	26 s	2 min 8 s	2 min 13 s

- **Analysis:**
 - ✓ There are something wrong with our email account. But when using user's own account, it can login in successful.
 - ✓ Although users failed, it's a warm-up task and it's no necessary to login when using skyscanner.
 - ✓ User comment:
 - Pros:** Easy to use.
 - Cons:** None

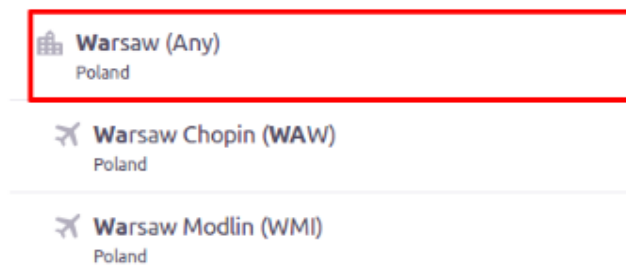

(4) Task 2:

- **Question:** Your friend from Poland invited you to Warsaw. You decide to depart from Taipei at 30/11/2018 and take one way ticket. You know that he will arrive to Warsaw long before you, so you decided to take the fastest flight.
- **Purpose:** User is able to order fastest one way ticket from Taipei to Warsaw on the date.
- **Result:**

	User 1 Taiwanese Experienced	User 2 Taiwanese Inexperienced	User 3 Foreigner Inexperienced	User 4 Foreigner Experienced
Completed	Complete success	Complete success	Complete success	Complete success
Time	1 min 50 s	4 min 38 s	2 min 11 s	1 min 52 s

- **Analysis:**

- ✓ User 2 took long time to complete because he didn't notice he can choose all airports at Warsaw. Because he is not familiar with Warsaw, he chose the wrong airport (no flight from Taipei) at first. But if he chooses "Any" at first, he can avoid this problem.

- ✓ User 1 didn't notice what the fastest meaning is on skyscanner at first.

(5) Task 3:

- **Question:** After very long year of hard work you decided to take a flight to Paris and rent a luxury hotel. You want to depart 30/11/2018 and return 09/12/2018. You want to land on Charles de Gaulle airport. You want to take the best possible flight when it comes to the price/time ratio. During this time you want to reserve the best hotel when it comes to the user ratings.

- **Purpose:** Round-trip, Price/time ratio, hotel function
- **Result:**

	User 1 Taiwanese Experienced	User 2 Taiwanese Inexperienced	User 3 Foreigner Inexperienced	User 4 Foreigner Experienced
Completed	Complete success	Complete success	Complete success	Complete success
Time	6 min 22 s	11 min 11 s	5 min 50 s	5 min 20 s

- **Analysis:**
 - ✓ User 2 took long time to complete because he hesitated in choosing hotel. We might need to limit the time of the task at first.
 - ✓ Two users are not sure what's "the best" meaning in skyscanner. Skyscanner didn't display the formula how they calculate the best option.

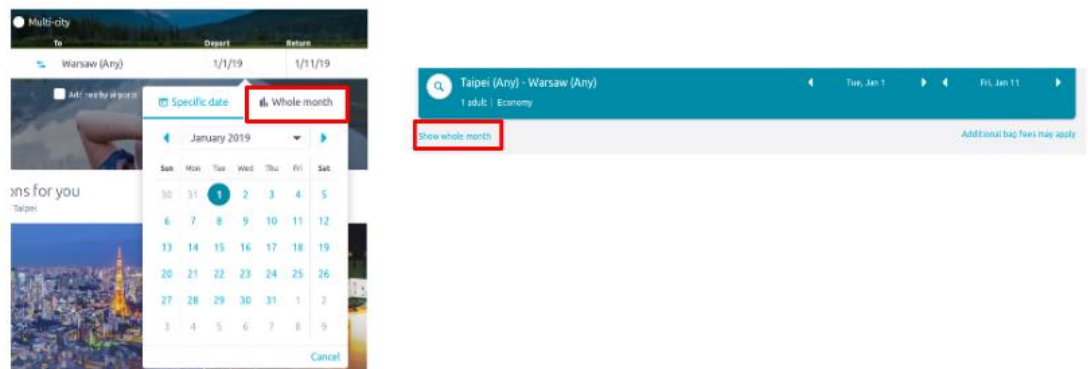

- ✓ User comment:
 - Pros:** Hotel with customer filter, like student, couple... is great.
 - Cons:** User 2 thought the comments are limited to show and the translation to Chinese of comments need to be improved.
- ✓ Others:
 - User 1 decided the hotel according to the number of comments, others' rating (prefer 4 or 5 stars) and the cost

(6) Task 4:

- **Question:** During winter vacation, you want to take a trip to Tokyo with your friend for five days. Because you are students, you decided to find the cheapest round-trip tickets in January.
- **Purpose:** Test the function of finding whole month price.
- **Result:**

	User 1 Taiwanese Experienced	User 2 Taiwanese Inexperienced	User 3 Foreigner Inexperienced	User 4 Foreigner Experienced
Completed	Partial success	Complete success	Complete success	Complete success
Time	7 min 50 s	8 min 1 s	2 min 35 s	3 min 3 s

- **Analysis:**
 - ✓ User 1 can't find the function of using whole month to search round-trip ticket without our assistance.

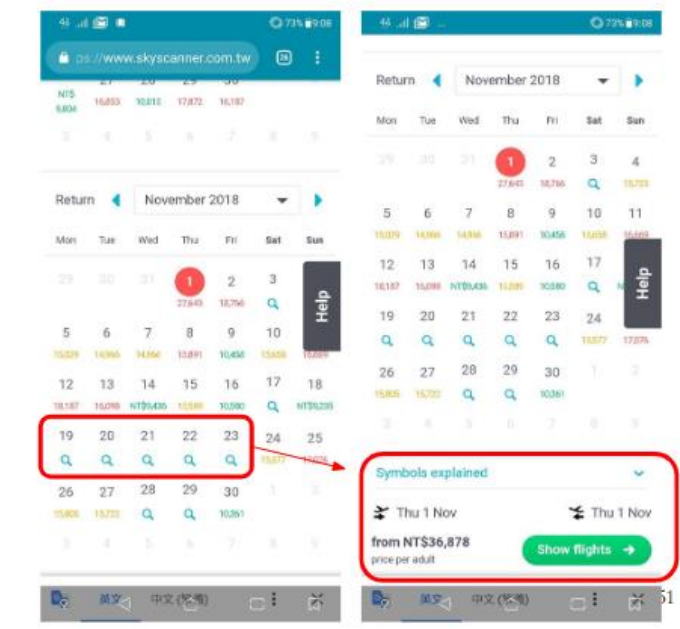

- ✓ The price showing on calendar is strange. It will change in same day when you choose different day.
- ✓ User suggestion:
User 1 thought Task 4 should consider culture background, for example student in January may need to take final exam, it's impossible have whole month free. We could change winter vacation to summer vacation.

(7) Task 5:

- **Question:** The typhoon is coming soon. The reporter said it will land on 2018/10/31. And now you are in Tokyo. So you need to back to Taipei before Typhoon coming. And you want to choose a cheapest ticket. Now, you only have a smartphone. So you need to use it to book a ticket.
- **Purpose:** Smartphone interface.
- **Result:**

	User 1 Taiwanese Experienced	User 2 Taiwanese Inexperienced	User 3 Foreigner Inexperienced	User 4 Foreigner Experienced
Completed	Complete success	Partial success	Complete success	Complete success
Time	3 min 54 s	6 min 20 s	3 min 15 s	3 min 50 s

- **Analysis:**
 - ✓ User 2 took long time to complete because Internet is too slow for searching some websites.
 - ✓ User 2 confused with "magnifier" function.

- ✓ **User suggestion:**
Skyscanner should consider the traffic time from user location to airport.
For instance, user can provide traffic time to filter some impossible flight.

(8) Total time cost among each user:

	User 1 Taiwanese Experienced	User 2 Taiwanese Inexperienced	User 3 Foreigner Inexperienced	User 4 Foreigner Experienced
Total Time	21 min 6 s	30 min 36 s	15 min 59 s	16 min 18 s

5. Conclusion

Overall, foreigners spent less time to complete five tasks. We thought maybe it's because they are more often to take flight and book tickets. Even if user 3 is inexperienced with Skyscanner, it's easier for him to leverage other website experience. For Taiwanese users, we can observe that inexperienced user spent more time. We can infer that although Skyscanner is a well-designed website, there are still some difficulties for the first-time user who seldom takes flight.

F. Appendix (user 1 to 4 results links, scripts)

[Part 1.] Consent Form

Consent Form

Informed consent:

I, _____ have read/listened to and understood the description of the study and agree to participate in it.

I understand that my participation is voluntary and that I am free to withdraw at any time without giving any reason, without my medical care or legal rights being affected.

Signature: _____ Date: _____

Recording agreement:

I, _____, give my permission to record everything that is happening on the screen. I was informed and I understand that no names will be attached to the video and screen recordings. Please be informed, that even if you will not agree to let us record the test, you still can participate in it.

Signature: _____ Date: _____

[Part 2.] Interview Script

Participant: _____

Date/Time: _____

I. Provide Consent Form

II. Prepare testing computer Run Screen recorder.

III. Introduction

Hello, my name is _____. Thank you for participating in our study. Please, fill the consent form (or "give the consent form", depending if the person filled it before). Thank you.
I would like to start by explaining the objects of this test, and the test itself in order for you to understand the whole process.

IV. Usability Testing

First of all, I'm working with the script, which means that all of the participants have exactly the same instructions and tasks.

Second of all, please remember that we are testing the system, not you, so there are no wrong answers and you don't have to worry that you will fail. The main goal of this test is to evaluate the Skyscanner and to check in which areas it can be improved in future.

Please, be informed that we have no affiliation with the Skyscanner, so you will not hurt our feelings in any way. We want you to be honest.

During the process, we would like you to speak aloud all your thoughts, feelings regarding the system and the things you are doing, so we can follow. We might remind you about it in case you will forget to comment on what you are doing, so please don't get irritated.

We would also like to inform you that everything happening on the screen will be recorded.

Please, rest assured that everything is confidential and will not be shared with anybody besides our Professor for the study purposes.

It is perfectly fine to ask me questions, although I might not respond immediately. We want to simulate usage of the system with as small assistance as possible.

Please read the task out loud and start whenever you are ready, do you have any questions before we start?

I'm going to start recording now, please be reminded that you have the full right to stop the test at any time.

V. Administer tasks

Task order: 1, 2, 3

Task 1: Login to the Skyscanner using provided credentials:

email: interactiondesignnthu2018@gmail.com password: Nthu2018

Success criteria:

Full success: Able to login.

Partial success: Able to login with our help

Fail: All other

Time	Notes	User comments	Incident

Task 2: Your friend from Poland invited you to Warsaw. You decide to depart from Taipei at 30/11/2018 and take one way ticket. You know that he will arrive to Warsaw long before you, so you decided to take the fastest flight.

Success criteria:

Full success: user is able to order fastest one way ticket from Taipei to Warsaw on the date mentioned above.

Partial success: The user is able to do the task partially/able to do the task with our help

Fail: Everything else.

Time	Notes	User comments	Incident

Task 3: After very long year of hard work you decided to take a flight to Paris and rent a luxury hotel. You want to depart 30/11/2018 and return 09/12/2018. You want to land on Charles de Gaulle airport. You want to take the best possible flight when it comes to the price/time ratio. During this time you want to reserve the best hotel when it comes to the user ratings.

Full success: User is able to reserve the flight and the best user-rated hotel during those dates. The flight is both ways.

Partial success: The user is able to do the task partially/able to do the task with our help

Fail: Everything else.

Time	Notes	User comments	Incident

Task 4: During winter vacation, you want to take a trip to Tokyo with your friend for five days. Because you are students, you decided to find the cheapest round-trip tickets in January.

Full success: User is able to order the cheapest round-trip tickets to Tokyo in January.

Partial success: The user is able to do the task partially/able to do the task with our help

Fail: All other

Time	Notes	User comments	Incident

Task 5: The typhoon is coming soon. The reporter said it will land on 2018/10/31. And now you are in Tokyo. So you need to back to Taipei before Typhoon coming. And you want to choose a cheapest ticket before 2018/10/31. Now, you only have a smartphone. So you need to use it to book a ticket.

Full success: User is able to order the cheapest back to Taipei via smartphone before 2018/10/31.

Partial success: The user is able to do the task partially/able to do the task with our help

Fail: All other

Time	Notes	User comments	Incident

Thank you. That's it for the tasks. Now, I'll stop the video recording.

[Stop it]

VI. Debriefing interview [5 minutes]

How did the session go?

What are your impressions of the site?

Let me look over your questionnaire for a moment. [Look at it, note any ?? issues]

What do you think about features you used today. What are your thoughts about them?

Do you have any other comments or questions?

VII. Team debrief

Team gathers 30 min to collect thoughts and come to consensus about what we've seen.

[Part 3.] Results of 4 users' link

https://drive.google.com/drive/folders/1zV37i5VimU0BJ4w2OxL8Qu_p32akZ69K?usp=sharing
