

Envisionment

Assistive Devices for those on the Spectrum

This topic ties in well with the prior topic that has also been scheduled this month. Essentially envisionment is required by designers of the device to visualize their own ideas as well as enable people to evaluate them. Some of the expected requirements are that it sets the appropriate medium for the stages of the process, the audience and finally the available resources. These can be achieved through sketch, mockups or prototypes. For our assistive device we have considered and sketched an envisionment for our use case.

NAME: Ted Baker

AGE: 51

OCCUPATION: Retired War-Veteran

PROFILE:

Born in Los Angeles, CA

Lives and retired in Pasadena

(Nearby his children)

Lives with his Wife and dog in an independent house in a lovely and safe neighborhood.

Visiting his son's family every weekend.

Manages the local art's studio for that she needs to perform the following activities daily:

- **Visit the local art's center**
